AEROMIX Awarded Wastewater Treatment System Project

AEROMIX Systems Inc. will supply one packaged wastewater treatment system to the US Army Corps of Engineers - Afghanistan Engineer District (USACE-AED). The USACE is helping the Afghan National Army (ANA) to develop a new training range complex at Camp Shaheen Mazar-e-Sharif in Kabul, Afghanistan. The system will supply an average of 10,000 gallons per day (GPD) of treated water to the complex. Engineering firm Technologists, Inc. of Rosslyn, Virginia U.S.A. is leading the infrastructure development project.

This efficient wastewater treatment system is compact, self-contained, and factory pre-fabricated to reduce time of installation at the project site. Our packaged wastewater treatment systems are designed and engineered specifically for remote areas outside the reach of municipal wastewater treatment systems.

AEROMIX offers customizable packaged plants as well as circular field-erected wastewater treatment systems capable of producing up to 2,000,000 GPD of clean water.

AEROMIX is a world leader in water and wastewater treatment equipment. Contact Melauna Estrada for more information on our water and wastewater treatment equipment.
