Innovative and economical aeration performance

The TORNADO surface aspirating aerator from **AEROMIX** delivers innovative and economical performance in any season. Featuring a refined high-efficiency design, the TORNADO aerator horizontally mixes all or part of a basin. Its large-diameter stationary draft tube with unrestricted air intake helps convert the least amount of energy into the maximum amount of aeration and mixing, giving you high oxygen transfer efficiency and high basin mixing efficiency.

Aeration action goes on just below the surface with no spraying and no splashing. It thus reduces odors and prevents

ice build-up, while the unique self-heating design keeps the system working all winter long. And because it's a totally self-contained unit requiring no additional blowers, pumps or mounting platforms, you save capital, installation, and operating costs. TORNADO surface aspirating aerators improve aeration and mixing in a wide range of applications, including: Wastewater treatment, sludge treatment, cold weather operation, ice control, supplemental aeration, VOC removal, leachate treatment, and odor and algae control. Ideal for wastewater treatment and supplemental aer-

ation, the TORNADO aerator provides complete basin design flexibility. Angle adjustment locking bolts allow the optimization of horizontal mixing velocities and bubble hang time. Fully adjustable mounting on floats or brackets allows basin aeration of any depth or shape. It's also simple to direct aeration and mixing toward a deficient area. Models are available from 2 to 100 horsepower.

AEROMIX manufactures a complete line of specialized aeration and mixing equipment for treating water and wastewater in industrial, municipal, and freshwater markets. The company has a group of applications engineers devoted exclusively to help treatment plants, consulting engineers, and contractors. Armed with AEROMIX's internally developed computer software and years of experience, they can help customers find the right solution for their unique application. ■

يقدم نظام التهوية بالشفط السطحي TORNADO من شركة AEROMIX أداءً متميزاً واقتصادياً في كل الفصول. يُحسن هذا الجهاز من عمليات التهوية والخلط في العديد من التطبيقات كمعالجة مياه الصرف الصحي ومعالجة الكمأة وإزالة المواد العضوية القابلة للتطاير غازياً، إلخ...
