

Rugged Solutions in Water and Wastewater

TREATMENT SYSTEMS

AEROMIX offers factory pre-fabricated packaged wastewater treatment plants, compact water treatment systems, and air strippers. Our treatment systems are used worldwide to provide potable water for thousands of people at hotels and resorts, shopping centers, office buildings, municipalities, and industrial and military facilities. Let our technical experts assist you in selecting the water or wastewater treatment system that matches your exact needs and requirements.

Packaged Plants

Compact Water Treatment

BREEZE® VOC Removal System

Field Erect Plant

AEROMIX Treatment System Products:

Packaged Plants

- Biological wastewater treatment system for domestic waste
- Capable of producing up to 150,000 gallons per day of potable water
- High degree of treatment - 99% removal of BODs
- Compact and self-contained
- Installed above or below grade
- Applications include suburban subdivisions, mobile home parks, motels, housing developments, hotels and resort areas, recreational facilities, highway rest areas, power stations, apartment complexes, and military posts

Compact Water Treatment

- Water treatment plants for the production of potable water from well or surface water
- Flows from 1,000 to 1,000,000 gallons per day of potable water
- Able to supply drinking water for populations from 100 to 25,000 people
- Pre-fabricated, skid-mounted, or containerized water treatment
- Treatment can include chemical addition, coagulation, media filtration, membrane separation, and disinfection depending on raw water quality
- Perfect for industrial applications, hotels and resorts, rural water supply, and military bases

BREEZE® VOC Removal System

- VOC Removal and Air Stripping System
- Maximum water flow of 200 gallons per minute
- Capable of removing nearly 100% of all volatile organic compounds (VOC) and other gases dissolved in water
- Compact, low maintenance, low cost alternative to filters, packed towers, and mechanical aerators
- Fine or coarse bubble diffusers are used to resist fouling caused by iron, calcium, and biological activity
- Can be operated with the assistance of an induced draft or positive displacement blower

Field Erect Plant

- Biological wastewater treatment system for domestic waste
- Capable of producing 150,000 to 2,000,000 gallons per day of potable water
- High degree of treatment - 99% removal of BODs
- Permanent or temporary installations
- Easy to install and low maintenance
- Flexible design permits process selection for each unique application
- Factory field painting by AEROMIX (optional)
- Ideal for growing municipalities, residential subdivisions, mobile home developments, small cities or towns, and industrial waste applications
