

AEROMIX Provides clean drinking water to thousands of children in Iraq

B **ackground**

Years of neglect and war severely limited the operation of drinking water systems in many parts of Iraq. Safe potable water was not available in many rural towns and villages. Immediate action was required to prevent disease.

S **olution**

AEROMIX supplied many skid mounted Compact Water Treatment. These systems draw water from poor quality surface water sources. The systems, filter, treat and disinfect the water making it suitable for healthy human consumption. Remote storage tanks were installed by a local contractor to store potable water for distribution. The AEROMIX Compact Water Treatment Systems were supplied as skid mounted units with all components installed and wire for immediate start-up at each site. Systems were specifically adapted to meet the operational and maintenance needs of the Iraqis. Additional maintenance needs will be addressed by the AEROMIX office in Basrah Iraq.
