Re : AEROMIX AERATORS VERSUS AIRE - O2 AERATORS

==========

M E S S A G E :

Both aerators are efficient based on the efficiency of oxygen transfer.

1. Tornado/aeromix is oil lubricated aerator and best for clean and slurry wastewater.

2. Aire-O2 is water lubricated aerator and best for clean and solid free water condition.

Our experience on Aire-O2 is not good, since inspite that it is water lubricated, the shafting still wear due to fine particles (sand) in the wastewater that becomes abrasive and damages the aire-O2 shafting. We don't have much problem on tornado/aeromix since lubrication is done consistently twice a month.

Best regards.
