

AEROMIX[®] SYMPHONY FLOATING FOUNTAIN

Fountain aeration can beautify a water body while keeping down algae formations, and aiding the natural cleansing process. The AEROMIX freshwater line of fountains and aerators designed a fountain made specifically for smaller water bodies. The SYMPHONY Floating Fountain is ideal for residential and commercial pond owners; it is easy to install and comes *completely* assembled with four different spray patterns.

- Comes fully assembled
- Adds aesthetic appeal while aerating your pond
- Requires little or no maintenance
- Requires only 30 inches of water depth

The SYMPHONY Fountain comes equipped with four (4) different spray patters: Clarinet, Harp, Flute or Tuba.

Each one produces its own distinctive form, ensuring that you will never lack variety. All four spray nozzles are anchored on the Symphony disc, so changing patterns is easy.

The SYMPHONY is equipped to provide an even more dramatic visual impact after dark. The optional underwater lighting system creates glowing water sculptures. The lighting system comes complete with 3-75 watt halogen bulbs, timer and power cable. Sequencers and colored lenses are also available.

The SYMPHONY is suitable for almost any water body. It is the easy way to enhance your property and promote a clean environment.

SYMPHONY Package contents:

- Fountain
- Float
